

PRATIK PATEL

Chief Architect | AI Agents | Platforms | Cloud | 3x Company Builder

Washington, DC (Open to Remote) | (518) 636-9399 | pratik@pa.tel
pa.tel | linkedin.com/in/prpatel05 | x.com/prpatel05 | github.com/prpatel05

SUMMARY

Chief Architect for Bounded and OpenApps. Building the full-stack AI agent app builder and policy-enforced runtime so coding agents can ship real apps with verify/deploy gates, data boundaries, auth, functions, realtime, payments, and hosting.

Three-time company builder: grew a 30-person engineering org at AWS, co-founded and sold a blockchain studio via acquisition by Dapper Labs, and took a healthtech startup from napkin sketch to 50K+ users as founding CTO.

Hands-on platform architect: set technical strategy, ship the hard seams, and speak for the architecture with founders and investors.

EXPERIENCE

Chief Architect

Aug 2025 - Present

Bounded | OpenApps

bounded.sh | openapps.xyz

Full-stack AI agent platforms. Bounded runs what agents build; OpenApps hosts autonomously run, openly governed apps on that runtime. Light lineage: OpenApps evolved from Poof; Bounded is the agent-era full-stack runtime (same team continuity).

- Own the full-stack architecture for Bounded: agent app builder plus policy-enforced runtime spanning verify/deploy gates, data boundaries and invariants, auth, data/files, server functions, realtime/live state, payments, and hosting.
- Design the agent-runtime contract so coding agents (Claude Code, Codex, and peers) can build while Bounded enforces declared boundaries: refused writes, watched/approved routed actions, and deploy gates that keep apps safe to iterate.
- Carry platform foundations into Bounded: multi-tenant isolation, deployment and edge path (including cold-start work that cut sandbox starts ~60% and supported 5K+ concurrent sessions), agent/MCP test harnesses, and multi-LLM routing by task complexity.
- Primary technical voice for architecture, roadmap, and infrastructure cost model across Bounded and OpenApps (alliance-backed apps that outlive their makers, hosted on Bounded).

Chief Technology Officer

May 2023 - Aug 2025 (Advisor to Dec 2025)

eddi

Seed-stage healthtech building AI-powered diabetes management. Sole technical executive; team of 6.

- Sole C-level technology leader: defined product and tech strategy, architected the HIPAA-compliant platform from scratch, and delivered on time and 20% under budget.
- Scaled to 50K+ users in under 12 months; forged provider and insurer partnerships for clinical integration.
- Led AI/ML strategy (LLM health insights chatbot; +35% daily active usage in 6 months) and investor-facing technical narrative that helped close \$3.5M across rounds.

Co-Founder & CTO -> Senior Software Engineer II

Jun 2021 - May 2023

Dapper Labs (via Acq. of Zay Codes)

Co-founded blockchain studio; acquired by Dapper Labs; retained to lead technical integration. Team of 15. Overlapped AWS through Mar 2022.

- Co-founded the company, recruited a 15-person engineering team, and shipped production Flow dApps across 5 client contracts.
- Won \$100K+ in hackathon prizes building open-source developer tools, raising brand visibility across the Flow ecosystem and accelerating acquisition interest from Dapper Labs.
- Led P&L and acquisition workstreams end-to-end through the successful acqui-hire by Dapper Labs.
- Built the NFT Catalog (community standard) and the Instagram API integration for Flow-based NFTs; mentored engineers as smart-contract SME post-acquisition.

Senior SDE -> Lead, Proactive Security

Jan 2015 - Mar 2022

Amazon Web Services

Promoted from Senior SDE to build and lead a new security organization: 4 teams, 30+ engineers; helped scale the broader org from 10 to 100+ engineers across 20+ teams.

- Hand-picked by VP-level leadership to build a new security engineering organization from the ground up: recruited and led 30+ engineers across 4 teams and owned delivery of automation products org-wide.
- Shipped a fuzzing and API-model-driven security testing framework covering all 15K+ AWS public APIs; injected automated security review into the AWS SDLC to accelerate service launches.
- Designed and shipped a web-based SSH client adopted by 15K+ daily users; led an account management platform handling 50K daily users at 300+ TPS.
- Drove development of the SSO/MFA authentication service for 1.5M+ Amazon employees; built an operator authorization service used across AWS safety-critical workflows.

SKILLS

Languages: TypeScript, JavaScript, Python, Go, Bash

Frameworks & Runtime: React, Next.js, Node.js, Bun, Playwright

Cloud & Infrastructure: AWS, Docker, Terraform, Cloudflare Workers, CI/CD

AI & Agent Platforms: LLM integration (Claude, GPT), agentic workflows (MCP, Claude Code), eval harnesses, multi-model routing, RAG

Architecture: Platform engineering, multi-tenant SaaS, distributed systems, realtime, security engineering, API-first design

Leadership: Technical strategy and roadmapping, org building, M&A technical diligence, investor-facing architecture narrative

EDUCATION

M.S., Computer Science & Computer Engineering (Dual Major) | Rensselaer Polytechnic Institute

GPA: 3.8 | Dean's List | RPI Medalist
