SUMMARY

Engineering and AI executive who builds teams and platforms from zero. At AWS, built and led a new 30+ engineer, 4-team Proactive Security organization, shipped automated security testing across all 15K+ public AWS APIs, drove the SSO/MFA service for 1.5M+ Amazon employees, and helped scale the broader org from 10 to 100+ engineers.

As founding CTO of eddii, took a HIPAA-compliant AI health platform to 50K+ users in under 12 months and helped raise $3.5M while owning the technology P&L and all hiring. Co-founded Zay Codes (acquired by Dapper Labs). Now Chief Architect of Bounded, a policy-enforced runtime that lets AI coding agents ship production apps safely.

EXPERIENCE

Chief Architect — Aug 2025 - Present

Bounded

bounded.sh | openapps.xyz | poof.new

AI agent platform. OpenApps runs on Bounded; poof.new is the team's earlier product line.

- Architected Bounded, a runtime that lets AI coding agents (Claude Code, Codex) build and deploy full-stack apps safely: each data write is checked against declared boundaries, risky actions need approval, and deploys fail closed.
- Cut sandbox cold starts ~60% and scaled multi-tenant isolation to 5K+ concurrent sessions.
- Shipped multi-LLM routing across providers by task complexity, cutting AI infrastructure cost while holding quality.
- Built test and eval harnesses for Claude Code, Codex, and MCP workflows, speeding delivery in the first 90 days.
- Own architecture, roadmap, and infrastructure cost model; primary technical voice with founders and investors.

Chief Technology Officer — May 2023 - Aug 2025

eddii

Seed-stage healthtech building AI-powered diabetes management. Sole technical executive; team of 6.

- Set product and tech strategy; architected the HIPAA-compliant platform from scratch; launched on time, 20% under budget.
- Scaled to 50K+ users in under 12 months; forged strategic partnerships with healthcare providers and insurers.
- Led AI/ML strategy: shipped an LLM-powered diabetes care chatbot that lifted daily active usage 35% in 6 months.
- Led investor tech demos that helped close $3.5M over multiple venture rounds; owned the tech P&L and all hiring.
- Continued as technical advisor through Dec 2025.

Senior Software Engineer II — Apr 2022 - May 2023

Dapper Labs

Joined through the acquisition of Zay Codes; retained to lead technical integration.

- Led post-acquisition technical integration and mentored engineers as the Flow smart-contract SME.
- Delivered the API integration used by Instagram to display Flow-based NFTs.

Co-Founder & CTO — Jun 2021 - Apr 2022

Zay Codes

Blockchain engineering studio, acquired by Dapper Labs. Team of 15. Overlapped AWS through Mar 2022.

- Co-founded the company; recruited and led a 15-person engineering team and won 5 client contracts for Flow blockchain dApps.
- Owned the P&L and led acquisition negotiations and legal workstreams end-to-end through the sale to Dapper Labs.
- Built the NFT Catalog (adopted as a Flow community-wide standard) and Flow Runner.
- Won $100K+ in hackathon prizes for open-source developer tools.

Senior SDE -> Lead, Proactive Security — Jan 2015 - Mar 2022

Amazon Web Services

Helped scale the broader org from 10 to 100+ engineers across 20+ teams.

- Hand-picked by VP-level leadership to found the Proactive Security engineering organization: recruited and led 30+ engineers across 4 teams and owned security automation products org-wide.

- Shipped an automated fuzzing and API-model-driven security testing framework covering all 15K+ public AWS APIs, eliminating manual security test authoring across service launches.
- Embedded automated security review into the AWS secure SDLC (Java, Python), replacing a multi-month manual review process and significantly accelerating AWS service launches.
- Drove development of the SSO/MFA authentication service protecting 1.5M+ Amazon employees.
- Built an operator authorization service (identity and access management) used across AWS safety-critical workflows.
- Designed and shipped a web-based SSH client adopted by 15K+ daily users with a 4.4/5 CSAT.
- Led an account management platform handling 50K daily users at 300+ TPS.

SKILLS

Leadership: Technical strategy and roadmapping, org building and hiring, P&L ownership, M&A diligence and integration, fundraising and investor communication

Security & Identity: Identity and access management (SSO, MFA, OAuth, authorization), secure SDLC, fuzzing and automated security testing, HIPAA, SOC 2

AI & Agents: Agent runtimes, agent guardrails and policy boundaries, MCP / Claude Code / Codex, evals, multi-model routing and LLM cost optimization, RAG, LLMs (Claude, GPT)

Architecture: Multi-tenant SaaS, distributed systems, serverless and edge, real-time systems

Stack: TypeScript, React / Node, Java, Python, AWS, Terraform / Docker, Cloudflare Workers

EDUCATION

M.S., Computer Science & Computer Engineering | Rensselaer Polytechnic Institute | GPA: 3.8 **May 2014 - Dec 2014**

B.S. | Rensselaer Polytechnic Institute **Aug 2010 - May 2014**

PUBLICATIONS

- **Developing Elastic Software for the Cloud** - S. Imai, P. Patel, C. Varela. Encyclopedia of Cloud Computing, Ch. 50, Wiley-IEEE Press, 2016.
